

7-Strand Hot Dip Galvanized Steel Wire

This 7-strand wire is constructed from steel and treated with a hot dip galvanization process. The resulting product offers high tensile strength and corrosion resistance for demanding applications.

Product Overview

High-Performance Galvanized Steel Wire

This 7-strand hot-dip galvanized steel wire is engineered for superior strength and durability in demanding industrial and construction environments. The specialized hot-dip galvanizing process applies a robust zinc coating, providing exceptional resistance against rust and harsh environmental conditions. With its combination of high tensile strength and flexibility, this wire is an ideal solution for structural support cables, fencing systems, and grounding applications.

Technical Specifications

Construction	7-Strand
Coating Process	Hot-dip galvanizing

Key Features

Performance Highlights

7 strands
Strand Count

Benefits

- Corrosion-resistant zinc coating
- High tensile strength
- Excellent flexibility
- Long-lasting environmental protection

Suitable Applications	Fencing, Support Cables, Grounding, Construction, Industrial
