

700C Alloy Road Bike

This road bike has an alloy 6061 frame and fork. It is equipped with a Shimano drivetrain and Alex rims.

Product Overview

Professional Road Performance

This 700C alloy road bike is engineered for competitive racing, rigorous training, and high-performance recreational riding. It features a lightweight, aerodynamic frame design paired with a precision-tuned drivetrain for seamless gear transitions. With its responsive handling and reliable braking system, this bicycle offers the perfect balance of speed, efficiency, and safety for demanding cyclists.

Technical Specifications

Wheel Size	700C
Frame Material	Alloy
Intended Use	Competitive Racing, Training, Recreational

Features

Key Performance Features

- Lightweight alloy frame construction
- Aerodynamic geometry
- Precision drivetrain for smooth shifting
- Responsive handling dynamics
- High-reliability braking system
