

72-Cell Polycrystalline Solar Panel

This high-efficiency polycrystalline solar panel is designed for optimal power generation. Featuring 72 solar cells, this panel provides a reliable and sustainable energy solution.

Product Overview

High-Efficiency 72-Cell Polycrystalline Solar Panel

This high-performance solar panel features a 72-cell polycrystalline configuration designed for optimal energy generation across diverse environmental conditions. It is engineered for long-term durability and reliability, making it an excellent choice for residential, commercial, and utility-scale solar projects. The robust construction ensures consistent power output and excellent stability, providing a sustainable energy solution for various professional applications.

Technical Specifications

Cell Count	72 cells
Cell Technology	Polycrystalline
Ideal Applications	Residential, Commercial, Industrial, Utility-Scale

Performance Features

Performance Highlights

72 Cells Cell Configuration	100 % Low-Light Performance Rating
---------------------------------------	--

Key Benefits

- Durable construction for harsh weather resistance
- Reliable long-term power stability
- Excellent performance under low-light conditions
- High-efficiency energy conversion
