

722-6 Motor Grader for Road Construction

The 722-6 motor grader is a heavy-duty construction machine designed for precision grading and leveling. Its hydraulic system provides precise control over the blade and attachments for smooth operation.

Overview

High-Performance Motor Grader

The 722-6 motor grader is a heavy-duty construction machine engineered for precision grading, leveling, and earthmoving tasks. It combines a powerful, high-torque engine with an advanced hydraulic system to ensure smooth, accurate blade control and operational efficiency. Designed for demanding work environments, the machine features a spacious, high-visibility cab that maximizes operator comfort and productivity.

Key Features

Operational Benefits

- High-torque engine performance
- Precise hydraulic blade control
- Spacious operator cab
- Excellent visibility
- Durable, robust construction

Primary Applications

Road Construction, Site Preparation, Heavy-Duty Grading

Performance

Machine Type

Motor Grader • Heavy-Duty
