

75L Rubber Kneader with Dust Cover

This 75L kneader is engineered for processing rubber and plastic materials. It incorporates a front dust cover to reduce environmental contamination and ensure operator safety.

Overview

Industrial-Grade Rubber Processing

This 75L kneader, often referred to as a Banbury mixer, is engineered for high-performance processing of rubber and plastic materials. Designed with a focus on industrial durability, it features a robust frame, integrated cooling system, and hydraulic controls to handle viscous compounds efficiently. The addition of a front dust cover enhances operator safety and helps maintain a cleaner working environment during the mixing process.

Technical Specifications

Mixing Chamber Capacity	75 L
Suitable Applications	Rubber Compounding, Plastic Processing, Viscous Material Mixing

Key Features

Safety & Environment

- Front dust cover for contamination control
- Enhanced operator safety design

Construction Highlights

Heavy-duty frame • Integrated cooling system • Hydraulic controls

Operations

Adjustable Parameters

- Mixing Speed
- Temperature
- Pressure
