

7C-2V Coaxial Cable

This coaxial cable is designed for transmitting high-frequency signals with minimal loss. It incorporates a central conductor surrounded by insulation and a metallic shield.

Product Overview

High-Performance Signal Transmission

The 7C-2V Coaxial Cable is engineered for reliable, high-frequency signal transmission. Its robust construction consists of a central conductor protected by high-quality insulation, a metallic shield, and a durable outer jacket, ensuring minimal signal loss. This cable is an ideal solution for various professional communication and signal transmission applications.

Technical Specifications

Construction Features

- Central conductor
- Insulation layer
- Metallic shielding
- Protective outer jacket

Cable Type

7C-2V Coaxial

Application

Primary Applications

High-frequency signal transmission, Communication systems, Signal transmission
