

800A Class 1 Split Core Current Transformer

This UK split core type transformer is designed for easy installation in circuit systems and networks. With a rated current of 800A and Class 1 accuracy, it provides precise current measurement for monitoring and control in power distribution and industrial automation.

Product Overview

High-Precision Current Monitoring

This split core current transformer is expertly engineered for easy integration into existing circuit systems and electrical networks. Its innovative split design allows for seamless installation without the need to disconnect primary wiring, significantly reducing downtime and labor. Designed for reliable performance in low-voltage applications, it offers Class 1 accuracy to ensure precise current monitoring in industrial and power distribution environments.

Technical Specifications

Rated Current

800 A

Rated Current

Design Features

- Split core design for easy installation
- Low voltage operation
- Non-invasive mounting

Accuracy Class	Class 1.0
Operating Frequency	50/60 Hz
Rated Voltage	0.72/3 kV
Compliance and Standards	IEC60044-1, CE
