

# 90 Degree Upender for Heavy Objects

This industrial upender rotates heavy objects by 90 degrees. It is equipped with a steel frame, a rotating platform with support structures, and a roller conveyor system.

## Product Overview

### Industrial 90-Degree Upender

This industrial 90-degree upender is engineered for the efficient rotation of heavy objects in demanding manufacturing and material handling environments. Featuring a robust steel frame and a semi-circular rotating platform, it ensures stability during the orientation change process. The system is equipped with an integrated roller conveyor for seamless loading and unloading, prioritizing both operational throughput and workplace safety.

## Technical Specifications

Rotation Angle	90 degrees
Frame Material	Robust Steel

## Key Features

### Operational Benefits

- Efficient workpiece orientation change
- Simplified loading and unloading process
- Enhanced operator safety
- Precise operational control

Key Features	Roller Conveyor System, Safety Guards, Automated Controls, Heavy-Duty Construction
