

9kW Immersion Heater Element with Flange

This 9kW immersion heater element is designed for water heating applications. It features a multi-loop tubular design and flange mounting for secure installation.

Overview

High-Efficiency Immersion Heating

This 9kW immersion heater element is engineered for reliable water heating in industrial tanks and vessels. Featuring a robust multi-loop tubular design, it ensures efficient heat transfer and consistent performance across various heating systems. The integrated flange mounting allows for secure, leak-proof installation, making it a dependable choice for demanding professional applications.

Technical Specifications

Power Rating	9 kW
Design Type	Multi-loop tubular
Mounting Type	Flange

Compliance & Standards

Certifications	CE, RoHS
----------------	----------

Applications

Recommended Use

- Water heaters
- Industrial heating systems
- Tanks and vessels
