

# 9V DC Power Supply with Supporting Board

This is a 9V direct current driving equipment with a supporting board. It is designed for powering and controlling small electrical devices.

## Product Overview

### Professional 9V Power Solution

This 9V direct current driving equipment is designed for precise power delivery and control in small-scale electrical applications. The kit includes a supporting board and mounting hardware, making it a versatile solution for robotics, DIY electronics, and educational projects. Its compact, durable design ensures reliable operation in various installation environments.

## Technical Specifications

Output Voltage	9 V
Power Type	DC (Direct Current)
Ideal Applications	Robotics, DIY Projects, Educational Kits, Small Electrical Devices

## Design and Build

### Mounting Options

- Metal mounting brackets included
- Versatile installation surfaces
- Secure attachment points

### Control Features

Adjustment Knobs • Indicator Lights

Housing Material	Durable Plastic
