

Abrasive Blasting Cabinet for Surface Preparation

This abrasive blasting cabinet is designed for efficient surface preparation and cleaning. The enclosed system provides a safe and controlled environment for removing rust, paint, scale, and other contaminants from various materials.

Product Overview

Professional Surface Preparation

The SBC100A abrasive blasting cabinet offers a controlled and safe environment for professional surface preparation, cleaning, and rust removal. Engineered for durability, this enclosed system effectively strips scale and paint while recycling abrasive media to maximize operational efficiency. It includes integrated safety features and connectivity options for dust extraction to ensure a clean, high-performance workshop experience.

Operational Specifications

Required Connections

- External air compressor (required for blasting gun)
- Vacuum system (optional, via dust collection port)

System Design

Enclosed System, Abrasive Recycling, Industrial Grade

Feature Highlights

Key Features

Large Viewing Window • Integrated Handling Gloves • Side Loading Door • Dust Collection Port
