

# Abrasive Chop Saw for Metal and Tile

The abrasive chop saw is a power tool used for cutting hard materials, such as metal, tile, and concrete. It is commonly used in construction, metalworking, and other industries where precise cutting of hard materials is required.

## Overview

### Professional Abrasive Chop Saw

This high-performance abrasive chop saw is engineered for precision cutting of hard materials, including metal, tile, and concrete. Utilizing a specialized abrasive disc, the tool ensures clean and accurate cuts for demanding construction and metalworking applications. Its robust design features a stable base and integrated clamping system, making it an essential asset for industrial environments requiring reliability and efficiency.

## Key Features

### Core Capabilities

- Powerful motor for heavy-duty cutting
- Adjustable fence for precision angle cuts
- Integrated spark deflector for operator safety
- Sturdy base for enhanced stability during operation
- Integrated vise/clamp for secure workpiece holding

## Applications

### Common Industries

Construction • Metalworking

### Material Compatibility

Metal, Tile, Concrete
