

Abrasive Cutting Wheels

Abrasive cutting wheels are essential components for cutting and grinding applications. They are used in metalworking, construction, and other industries for efficient material removal.

Product Overview

Professional Abrasive Cutting Solutions

These high-performance abrasive cutting wheels are engineered for precision and efficiency in demanding industrial environments. Designed for compatibility with standard cutting machinery, they provide reliable material removal for metalworking and construction tasks. Available in multiple sizes, these tools offer versatility for a wide range of heavy-duty cutting applications.

Technical Specifications

Design Features

- Central mounting hole for secure attachment
- High-durability abrasive composition
- Multi-size availability for versatile cutting

Performance Metrics

1 Grade

Heavy-Duty Design

Primary Applications

Metalworking, Construction, Industrial Grinding, Material Removal
