

Abrasive Emery Grain

Abrasive emery grains are used for grinding, polishing, and lapping metals and other hard materials. They are suitable for expressway pavement, runway, and industrial floor applications.

Product Overview

High-Performance Abrasive Solution

Abrasive Emery Grain is a versatile, high-hardness material engineered for demanding industrial environments. It provides exceptional wear resistance and impact load-bearing capabilities, making it ideal for both heavy-duty flooring and precision abrasive applications. Its integral adhesive properties ensure long-lasting durability without dusting or delamination, offering a cost-effective solution for diverse manufacturing and construction sectors.

Applications

Flooring Usage

- Expressway pavement
- Airport runways
- Industrial floors
- Parking lots
- Warehouses
- Warehouse-style shopping malls
- Vehicle walking areas

Sandblasting & Industrial Usage

- Shipbuilding plants
- Steel plants
- Powder plants
- Electronics & Microelectronics
- Communication & Computer manufacturing
- Pharmaceutical & Food processing
- Precision machinery
- Electroplating & Spraying workshops

Performance

Maintenance & Cost

Easy Cleaning • Material Saving • Cost Reduction

Performance Features

High Surface Hardness, Wear Resistant, Dust-Free, Impact Resistant, Strong Adhesion
