

Abrasive Flap Discs for Grinding and Polishing

These abrasive flap discs are designed for efficient grinding, blending, and polishing on various materials. Constructed with overlapping abrasive flaps bonded to a sturdy backing plate, they offer consistent performance and extended lifespan.

Product Overview

Abrasive Flap Discs for Professional Use

These abrasive flap discs are engineered for high-performance grinding, blending, and polishing across a variety of materials. Featuring a design with overlapping abrasive flaps securely bonded to a sturdy backing plate, these discs ensure consistent performance throughout their lifespan. They are an essential tool for angle grinders, providing both aggressive material removal and precise surface finishing.

Technical Specifications

Primary Applications	Grinding, Blending, Polishing, Stock Removal, Surface Preparation
Tool Compatibility	Angle Grinders

Features

Key Performance Attributes

- Consistent grinding performance
- Extended product lifespan
- Aggressive material removal
- Smooth surface finishing
