

Abrasive Flap Discs

Abrasive flap discs are designed for grinding and finishing on a variety of materials. The overlapping abrasive flaps provide a consistent cutting action and longer life compared to traditional grinding wheels.

Overview

Professional Abrasive Flap Discs

These abrasive flap discs are engineered for high-performance grinding and finishing across a wide range of materials. Featuring overlapping abrasive flaps, they deliver a consistent cutting action and extended service life compared to traditional grinding wheels. They are an essential tool for weld blending, deburring, and surface preparation tasks, designed specifically for use with standard angle grinders.

Technical Specifications

Primary Applications	Weld Blending, Deburring, Surface Preparation, Grinding, Finishing
Tool Compatibility	Angle Grinders

Design Features

Design Advantages

- Overlapping abrasive flaps for consistent cutting
- Extended service life
- Durable backing plate
- High-quality abrasive grains
