

# Abrasive Flap Wheel for Grinding and Finishing

Unmounted flap wheels are abrasive tools used for grinding, blending, and finishing various materials. The unmounted design allows for customized mounting onto various spindles or arbors, offering versatility in different applications.

## Product Overview

### Professional Abrasive Flap Wheels

These unmounted flap wheels are engineered for consistent performance in heavy-duty grinding, deburring, and surface finishing applications. Featuring a radial arrangement of abrasive lamellas on a metal center, they provide a long service life and uniform stock removal. They are highly versatile tools suitable for stainless steel, ferrous and non-ferrous metals, wood, and plastic surfaces.

## Technical Specifications

Minimum Diameter	4 inch
Design Type	Unmounted
Compatible Materials	Stainless Steel, Ferrous Metals, Non-ferrous Metals, Wood, Plastic
