

Abrasive Grinding Blocks

Abrasive grinding blocks are designed for precision material removal and surface finishing. These blocks are made from durable abrasive grains bonded with a wear-resistant matrix, providing consistent performance and an extended lifespan.

Product Overview

High-Performance Abrasive Grinding Blocks

These high-density abrasive grinding blocks are engineered for precision material removal and superior surface finishing. Constructed with durable abrasive grains held in a wear-resistant matrix, they ensure consistent performance and an extended operational lifespan. They are versatile tools suitable for deburring, polishing, and stock removal across a wide range of materials including metals, ceramics, and composites.

Technical Details

Compatible Materials

- Metals
- Ceramics
- Composites

Process Compatibility

Manual Grinding • Automated Grinding

Primary Applications

Deburring, Polishing, Stock Removal

Performance Metrics

Key Performance Indicators

1 High

Density Level

1 High

Wear Resistance
