

Abrasive Grinding Media for Surface Preparation

Abrasive grinding media are designed for surface preparation, deburring, polishing, and finishing. They are available in different sizes and compositions to suit specific grinding requirements.

Product Overview

Professional Abrasive Grinding Media

These high-quality abrasive grinding media are engineered for comprehensive surface preparation, including deburring, polishing, and finishing. Designed for versatility, they are compatible with a wide range of industrial equipment such as vibratory finishing machines and tumbling barrels. With various compositions and sizes available, these media ensure precise results for your specific industrial processing requirements.

Applications

Primary Applications

Surface Preparation, Deburring, Polishing, Finishing

Compatibility

Compatible Equipment

- Vibratory finishing machines
- Tumbling barrels
- Abrasive processing equipment
