

# Abrasive Grinding Wheel

These high-performance abrasive grinding wheels are designed for material removal applications. They are suitable for shaping, deburring, and surface preparation on metals, composites, and other materials.

## Product Overview

### High-Performance Grinding Solution

These abrasive grinding wheels are engineered for high-performance material removal across a wide range of industrial applications. Featuring a durable construction, they are designed specifically for use with electric power tools. The open structure design is a key feature that minimizes heat buildup during operation, ensuring consistent and efficient performance over the life of the wheel.

## Application & Usage

### Compatible Materials

- Metals
- Composites

### Primary Applications

Shaping, Deburring, Surface Preparation

## Technical Features

### Tool Compatibility

Electric Tools

### Heat Management

Yes
