

Abrasive Sanding Discs

Abrasive sanding discs are essential for grinding, polishing, and finishing a variety of materials. They feature a backing material coated with abrasive grains, available in multiple sizes and grits to suit diverse applications.

Product Overview

Professional Grade Abrasive Sanding Discs

These abrasive sanding discs are engineered for high-performance grinding, polishing, and surface finishing across a wide range of materials. Utilizing premium abrasive grains like aluminum oxide or silicon carbide, they ensure consistent material removal and smooth surface texture. Designed for durability and versatility, these discs are compatible with standard angle grinders and backing pads, making them an essential tool for both heavy-duty stock removal and fine precision finishing.

Technical Specifications

| | |
|--------------------|---------------------------------|
| Disc Diameter | 125 mm |
| Center Hole Size | 22 mm |
| Abrasive Materials | Aluminum Oxide, Silicon Carbide |

Application Details

Compatible Equipment

- Angle Grinders
- Power Tools with Compatible Backing Pad

Typical Applications

Grinding • Polishing • Finishing • Stock Removal
