Product Overview

Versatile ABS/PC Plastic Enclosure

This high-performance plastic junction box is engineered from a durable blend of ABS and PC materials, offering a lightweight yet robust solution for electrical component housing. Weighing only 25% of a comparable metal enclosure, it ensures easy installation and handling without sacrificing structural integrity. Designed for long-term reliability, the unit is completely corrosion-resistant and features superior electrical insulation properties, making it an ideal choice for diverse industrial control and power distribution environments.

Features & Benefits

Key Benefits

- Corrosion-free construction
- Superior electrical insulation
- Lightweight design for easy installation
- Suitable for terminal substitution
