

AC DC Hipot Test Set 100kV

This hipot test set is designed to assess the insulation strength of electrical equipment. The dry-type transformer generates high AC voltages up to 100kV to perform withstand voltage tests.

Product Overview

GTB-10/100 Dry Hipot Test Set

The GTB-10/100 is a specialized high-voltage testing device engineered to assess the insulation strength of critical electrical equipment. As a dry-type transformer, it utilizes air as its primary insulation medium, offering a robust solution for withstand voltage testing. Capable of generating high AC voltages up to 100kV, this unit is essential for verifying system integrity and preventing insulation breakdown in various electrical components.

Technical Specifications

Input Voltage	10 kV
Output Voltage	100 kV

Features

Safety Features	Overload Protection, Zero-start Interlocks
-----------------	--

Design

Insulation Type	Dry-type (Air Insulated)
Portability	Yes
