

AC Electric Generating and Welding Double-Duty Generator

This AC electric generating and welding generator is designed for both power generation and welding applications. The three-phase AC generator is suitable for various industrial and commercial uses.

Overview

Dual-Function Power Solution

This versatile unit is designed as a double-duty generator capable of both AC electricity generation and welding operations. Engineered for industrial and commercial reliability, it serves as a robust solution for sites requiring simultaneous power access and welding capabilities. Its three-phase design ensures consistent performance for demanding professional applications.

Technical Specifications

Generator Type	Three-phase AC generating and welding double-duty
Series	SD/SDC Series
Model Variant	SDC-8-15

Capabilities

Primary Functions	AC Power Generation, Welding
-------------------	------------------------------
