

AC Electric Generator DC Welder

This dual-purpose machine is designed for AC electricity generation and DC welding. It provides on-site power and welding capabilities, featuring precise welding control and AC output.

Product Overview

Dual-Purpose Power & Welding Solution

This robust machine is engineered as a dual-purpose unit capable of both AC electricity generation and DC welding. Designed for reliability in demanding on-site environments, it provides a versatile solution for professionals needing consistent power and precise welding capabilities. The unit features an integrated current adjuster for accurate control and is built for consistent performance.
