

AC Synchronous Motor 2.5 RPM 4W

This compact synchronous motor is designed for low-speed applications. It features a durable metal housing and a shaft for direct drive.

Product Overview

Compact AC Synchronous Motor

This compact synchronous motor is designed for low-speed applications requiring precise and consistent rotational movement. Housed in a durable metal casing, it offers a reliable 2.5 RPM output with low energy consumption. It is an ideal choice for automation systems, display units, and home appliances where accurate timing is essential.

Technical Specifications

Performance Metrics

2.5 RPM

Rotational Speed

4 W

Power Consumption

Electrical Input

230V AC, 50Hz

Model Identifier

TY49II

Compliance and Features

Quality Certifications

CE

Design Features

Metal Housing, Mounting Tabs, Low Power Consumption, Precision Rotor
