

AC/DC TIG Welding Machine WSE-500

This AC/DC TIG welding machine supports both AC and DC welding modes, making it suitable for welding various metals including aluminum, steel, and stainless steel. It features adjustable parameters for precise control over current, voltage, and pulse frequency, along with a user-friendly interface.

Overview

Professional AC/DC TIG Welding Solution

The WSE-500 is a versatile AC/DC TIG welding machine engineered for demanding industrial environments. It provides full control over welding parameters, including current, voltage, and pulse frequency, ensuring high precision for fabrication and repair tasks. Compatible with a variety of metals such as aluminum, steel, and stainless steel, this robust unit is designed for durability and ease of operation.

Technical Specifications

Compatible Materials

- Aluminum
- Steel
- Stainless Steel

Welding Modes

AC TIG, DC TIG

Performance

Key Performance Parameters

500 A

Model Capacity

Features

Adjustable Process Controls

- Welding Current
- Voltage
- Pulse Frequency

Construction

Robust Design • Industrial Grade • User-Friendly Interface
