

# AC/DC Universal Motor

This universal motor is designed to operate on both AC and DC power. It is commonly used in household appliances and power tools.

## Product Overview

### Universal Motor Overview

This high-speed AC/DC universal motor is engineered for reliability and high performance across a variety of power tool and appliance applications. It features a robust design with high-quality pure copper windings to ensure a long operational lifespan and efficient power delivery. The motor is built with a laminated stator core to minimize eddy current losses, contributing to superior energy efficiency during operation.

## Technical Specifications

### Key Features

- High speed performance
- Commutation brushes included
- Eddy current loss reduction design
- Long-life reliability

<b>Power Compatibility</b>	AC, DC
<b>Core Materials</b>	Pure Copper Windings, Laminated Stator Core
