

Acrylamide Powder for Microbiology

This acrylamide powder has a purity of 98% minimum. It is suitable for microbiology applications and comes in a 25 KG package.

Product Overview

High-Purity Acrylamide for Microbiology

This high-grade Acrylamide powder is specifically formulated for microbiology applications, ensuring consistent results in laboratory environments. Featuring a minimum purity level of 98%, it meets the rigorous standards required for sensitive biological research and analysis. The product is securely packaged in 25kg units, designed for safe handling and efficient storage in professional research facilities.
