

Acrylonitrile Styrene (AS) Resin - 25 kg Bag

Acrylonitrile Styrene (AS) resin is a thermoplastic polymer known for its rigidity, dimensional stability, and chemical resistance. Packaged in a 25 kg bag, AS resin offers good processability and can be easily molded into various shapes and forms.

Overview

High-Performance AS Resin

Acrylonitrile Styrene (AS) resin is a versatile thermoplastic polymer engineered for applications demanding a precise balance of rigidity, dimensional stability, and chemical resistance. This material is widely utilized in the manufacturing of automotive components, durable appliance housings, and high-quality consumer goods. Its excellent processability allows for efficient molding into complex shapes and forms, making it a reliable choice for industrial production.

Technical Specifications

Packaging Weight	25 kg
Material Type	Acrylonitrile Styrene (AS) Resin

Key Features

Common Applications

- Automotive parts
- Appliance housings
- Consumer goods

Key Material Properties	Rigidity, Dimensional Stability, Chemical Resistance, Good Processability
-------------------------	---
