Product Overview

High-Performance Carbon Block Filtration

These activated carbon block filter cartridges are engineered for superior water purification, effectively removing chlorine, unpleasant tastes, odors, and microorganisms. Utilizing advanced extrusion processes and high-quality materials, they offer excellent durability, minimal pressure loss, and high flow rates. Designed for versatility, these filters serve as an economic solution across residential, commercial, and industrial water treatment applications.

Key Features

Performance Highlights

High Chlorine Reduction, Odor & Taste Removal, Low Pressure Drop, High Flow Rate, FDA Approved Material, Extended Service Life

Applications

Suitable Industries & Uses

- Chemical Processing
- Electronics Manufacturing
- PCB Industry
- Drinking Water Systems
- Plating Processes
- Food & Beverage
- Pre RO/DI Filtration
- Waste Water Treatment

Technical Details

Material Safety

FDA Approved

Operational Advantages

- No carbon fines release
- Extensive chemical compatibility
- Enhanced dirt holding capacity
- Customizable sizing options
