

Active Network Antenna with Control Unit

This active antenna is designed for network hardware applications. It features a control unit that includes power lift and rotate controls.

Product Overview

Professional Active Network Antenna System

This active network antenna system is engineered for reliable signal management in demanding network environments. The unit features precise mechanical control, allowing users to adjust the antenna's orientation via dedicated power lift and rotation controls. Designed for seamless integration with network hardware, it offers robust performance and ease of operation for professional installations.

Technical Specifications

Model Identifier	EM-900
Device Type	Active Antenna
Primary Application	Computer Network Equipment, Signal Management

Control Interface

Available Controls

- Power Lift (Up/Down)
- Rotation (Left/Right)
- Clean
- Start

Control Unit

Integrated Control Unit • Manual Adjustment
