

Active Network Antenna with Control Unit

This active antenna enhances network performance by amplifying signals. It includes a control unit for operation, improving reception in areas with weak signals or interference.

Overview

High-Performance Network Connectivity

This active network antenna is engineered to enhance signal reception and network stability in challenging environments. Equipped with a dedicated control unit, it allows for precise adjustments to optimize data transmission and reduce interference. Ideal for professional network setups requiring reliable performance and improved signal strength.

Technical Specifications

Model Number	SNA-2000B
Device Type	Active Antenna
Key Features	Signal Amplification, Remote Control, Adjustable Angle

Control & Interface

Interface Options

- Power Input
- Remote Control Interface
- Angle Adjustment Control

Control Unit	Yes
