

AD56-22 22/25 Indicator Light

This indicator light provides clear visual indication of equipment status, alarms, or process conditions. Featuring a standard form factor with a 22/25mm mounting size, the B type indicator light is suitable for use in control panels, machinery, and other equipment where visual signaling is required.

General Overview

Industrial Signaling Reliability

The AD56-22 B type indicator light is a compact, high-performance signaling device designed for diverse industrial and commercial applications. Featuring a versatile 22/25mm standard mounting size, it ensures seamless integration into control panels and heavy machinery. Built with durable materials, this indicator provides long-lasting, reliable visual status updates and alarm notifications in demanding environments.
