

Adjustable Height Parabolic Space Heater

This parabolic heater uses a parabolic reflector to focus heat output for efficient space heating. It features adjustable height and oscillation for wide heat distribution, with safety features including tip-over and overheat protection.

Product Overview

Efficient Focused Heating

This adjustable height parabolic space heater is engineered for efficient and targeted warmth in both home and office environments. Utilizing a parabolic reflector, it concentrates heat output to provide immediate, focused comfort exactly where you need it. The unit features a modern digital control panel for precise temperature management and oscillation for wider heat distribution.
