

Adjustable Self-Centering Chuck

This adjustable self-centering chuck is designed for industrial machinery applications. It features adjustable jaws for versatile workpiece holding.

Overview

Precision Engineering for Industrial Applications

This adjustable self-centering chuck is engineered for high-precision industrial machinery, specifically designed to meet the rigorous demands of lathe operations and rotating machinery. Featuring versatile adjustable jaws, it ensures accurate and repeatable workpiece centering for consistent machining outcomes. Constructed from high-quality, durable materials, this tool provides a secure and reliable grip, enhancing safety and performance in demanding production environments.

Technical Specifications

Performance Features

- High-precision centering
- Repeatable accuracy
- Secure workpiece grip
- Durable construction

Clamping Mechanism	Self-centering
Jaw Adjustability	Yes
Recommended Applications	Lathes, Rotating Machinery, Industrial Machining
