

Adjustable Steel Shoring Prop

Floor prop is a support component used in floor formwork. Its simple structure allows flexible, economical, and convenient assembly, often used with a tripod.

Product Overview

Professional Adjustable Shoring Prop

This adjustable steel shoring prop is engineered to provide reliable temporary support in a variety of construction environments. Its telescopic design ensures versatile height adjustment, while the heavy-duty tripod base and load-bearing top plate work together to offer maximum stability and secure contact. Ideal for demanding tasks such as concrete formwork, scaffolding support, and general heavy-duty site applications.

Key Features

Core Features

- Telescopic height adjustment
- Sturdy tripod base for enhanced stability
- Load-bearing top plate
- Durable steel construction

Applications

Primary Applications

Concrete Formwork, Scaffolding, General Construction, Temporary Structural Support
