

Advanced Jet Trainer and Light Combat Aircraft

This supersonic jet is an advanced trainer and light combat aircraft. It is designed to bridge the gap between basic trainers and frontline combat aircraft.

Product Overview

Advanced Training and Combat Capabilities

This supersonic advanced jet trainer and light combat aircraft is engineered to bridge the critical gap between basic training and frontline operational aircraft. It offers a cost-effective, high-performance platform suitable for both pilot training and specialized light attack missions. With its modern glass cockpit, advanced avionics, and dual-engine configuration, the aircraft delivers exceptional maneuverability and operational flexibility for diverse air force requirements.

Technical Specifications

Flight Performance

1 Mach Class

Supersonic Capability

Propulsion

Dual turbofan engines

Operational Features

Mission Profiles

- Advanced Pilot Training
- Light Attack Missions

Armament Compatibility

Air-to-Air • Air-to-Ground

Cockpit Systems

Glass Cockpit, Advanced Avionics
