

Aerial Bundle Cable Dead End Clamp

These dead end clamps secure aerial bundle cables in power distribution networks. They provide a termination point for overhead cables, ensuring stable electrical connections.

ADDITIONAL IMAGES

Product Overview

Robust dead end clamp designed for secure termination in overhead power infrastructure.

High-Performance Dead End Clamps for ABC Networks

These dead end clamps are engineered for the secure termination of aerial bundle cables (ABC) in overhead power distribution networks. Designed to provide both mechanical strength and reliable electrical connectivity, they ensure long-term stability in demanding outdoor environments. The robust construction offers excellent resistance to corrosion and weathering, making them essential accessories for professional utility and power transmission projects.

Primary Application

Securing and terminating aerial bundle cables (ABC) in power distribution networks

Technical Features

Installation Benefits

- Easy installation and adjustment
- Accommodates various cable sizes
- Reliable termination point
- Suitable for outdoor environments

Material Properties

Corrosion Resistant, Weather Resistant, High Mechanical Strength, Durable Construction

Compliance & Quality

Comprehensive range of quality solutions for cable and utility networks, compliant with international standards.

Certifications

CE • ISO 9001 • UL • BV • SGS

Warranty Period

1 year

Supply & Service

Service Capabilities

- OEM Service Available
- Free Samples Provided
- Professional Export Support

Standard Lead Time

15 days
