

Agricultural Carburetor for Combustion Engine

This carburetor mixes air and fuel for an internal combustion engine. The throttle plate regulates airflow, optimizing the air-fuel mixture.

Product Overview

High-Efficiency Agricultural Carburetor

This agricultural carburetor is designed for precise air-fuel mixing in internal combustion engines. Utilizing a single-barrel architecture with an integrated venturi and throttle plate, it ensures reliable engine performance. Its design optimizes the air-fuel mixture to deliver consistent power output, making it an essential component for demanding agricultural machinery operations.

Technical Specifications

Key Components

- Venturi for low-pressure fuel induction
- Throttle plate for airflow control

Configuration	Single-barrel
---------------	---------------

Compatibility

Engine Suitability	Internal Combustion, Classic Engines, Modern Small Engines
--------------------	--
