

Agricultural Centrifugal Water Pump

This centrifugal water pump is engineered for agricultural drainage and irrigation. Its precision-engineered impeller and volute design maximize hydraulic efficiency, reducing energy consumption and operational costs.

Product Overview

High-Efficiency Agricultural Centrifugal Pump

The F104 centrifugal water pump is a robust solution engineered specifically for agricultural drainage and irrigation needs. Featuring a durable cast construction, it provides reliable performance even in demanding field environments. The precision-designed impeller and volute maximize hydraulic efficiency, helping to lower energy consumption and reduce long-term operational costs for your farming enterprise.

Technical Specifications

Compatible Fluids

- Clean water
- Water with small suspended solids

Material

Cast Construction

Suitable Applications

Agricultural Irrigation, Drainage Operations

Performance

Efficiency Highlights

100 %

Hydraulic Efficiency
