

Agricultural Coating Machinery Rims

These are replacement rims for agricultural coating machinery. The rims feature circular mounting holes and a black rubber composite material around the outer edge.

Product Overview

High-Performance Agricultural Rims

These precision-engineered metal rims are designed specifically for agricultural spraying and spreading machinery. Featuring a durable, smooth glossy finish, they are built to withstand rigorous operating conditions in farming environments. The design includes integrated sealing or dampening components to ensure stability and reliable performance when attached to your equipment hub.

Physical Properties

Finish Type	Glossy
Color	White

Technical Specifications

Mounting Interface	Circular mounting holes
Component Features	Metal core, Rubber sealing edge, Vibration dampening, Corrosion-resistant coating

Application

Compatible Equipment

- Agricultural sprayers
- Spreading equipment
