Overview

Professional Agricultural Cultivator

This agricultural cultivator is a robust implement designed for secondary tillage, soil aeration, and seedbed preparation. It effectively stirs and pulverizes soil to remove weeds and improve water infiltration, making it ideal for crops like corn, soybean, and beet. Featuring a rigid, heavy-duty frame and adjustable depth control, this machine ensures consistent performance and durability across various soil conditions.

Operational Capabilities

Suitable Crops

- Corn
- Soybean
- Beet

Primary Functions

Cultivating, Furrowing, Ridging, Deep Loosening, Weed Control, Seedbed Preparation

Technical Features

Frame Construction	Rigid, heavy-duty design for stability and durability in tough field conditions
Tine Material	High-strength steel
Depth Control	Yes
Hitch Type	Three-point hitch
Shank Type	Heavy-duty with reversible points
