

Agricultural Disc Harrow for Soil Preparation

This heavy-duty farm implement is designed for soil preparation and cultivation. It efficiently tills and turns soil, breaking up clods and preparing the ground for planting with its multiple rows of independently rotating discs.

Overview

Heavy-Duty Soil Preparation

This agricultural disc harrow is engineered for demanding soil cultivation tasks, featuring a robust frame designed for longevity in tough field conditions. Equipped with multiple rows of independently rotating discs, it effectively breaks up soil clods and ensures deep penetration for optimal seedbed preparation. The central hitching point allows for seamless tractor attachment, making it a reliable solution for professional farming operations.

Design & Construction

Construction Type

Heavy-duty • Agricultural Grade

Frame Color

Red

Operational Features

Disc Configuration

- Multiple rows of discs
- Independently rotating discs
- Angled disc design for comprehensive coverage

Primary Application

Soil Preparation, Cultivation, Clod Breaking, Seedbed Preparation

Compatibility

Attachment System

Central hitching point for tractor integration
