

# Agricultural Hydraulic Arm

This hydraulic arm is designed for agricultural machinery, featuring a robust frame and multiple hydraulic cylinders for versatile movement. It is equipped with a control valve block and hydraulic hoses for precise operation in agricultural settings.

## ADDITIONAL IMAGES

## Product Overview

### Versatile Agricultural Hydraulic Arm

This hydraulic arm is designed for efficient hedge and bush maintenance in agricultural settings. It features an innovative reversible frame that allows for both front and rear tractor mounting without requiring complex alterations. With a flexible design that enables operation on both the left and right sides of the tractor, it provides exceptional maneuverability for various landscaping tasks.

## Technical Specifications

### Available Cutting Bar Sizes

- 130
- 145
- 160

### Mounting Options

Front Mount, Rear Mount, Reversible Frame

### Operational Reach

Left and Right side operation

## Operational Features

### Primary Applications

Hedge Cutting • Bush Trimming • Agricultural Maintenance

### Control Mechanism

Second arm rotation control for precise positioning
