

Agricultural Irrigation and Fertilization System

This agricultural machinery setup provides efficient irrigation and fertilization. It includes a venting valve, fertilizer valve, grid filters, a centrifugal filter, fertilizer tanks, and a sand storage tank.

Overview

Comprehensive Irrigation and Fertilization Solution

This agricultural machinery system is engineered to provide a complete solution for efficient field irrigation and nutrient delivery. The integrated setup features advanced filtration and pressure regulation components, ensuring optimal fluid flow and system longevity. Designed for professional agricultural environments, it combines precise fertilization control with robust sediment management to maximize crop health and operational efficiency.

System Components

Included Components

- Venting valve
- Fertilizer valve
- Grid filters
- Centrifugal filter
- Fertilizer tanks
- Sand storage tank

Design Series/Year

2006

Functionality

System Capabilities

Pressure Regulation, Fertilization, Filtration, Sediment Management
