

Agricultural Irrigation Water Pump

This water pump is designed for agricultural machinery, specifically drainage and irrigation systems. Its robust construction includes a toothed pulley for belt-driven operation and a durable metal housing.

Product Overview

High-Efficiency Agricultural Irrigation Pump

This robust agricultural water pump is engineered specifically for demanding drainage and irrigation environments. Built with a heavy-duty metal housing, the unit offers exceptional wear resistance and long-term durability. It features a reliable toothed pulley design, making it perfectly suited for belt-driven machinery applications in professional farming settings.

Technical Specifications

| | |
|-----------------------|---|
| Drive Configuration | Belt-driven |
| Construction Material | Durable industrial-grade metal |
| Suitable Applications | Agricultural Irrigation, Machinery Drainage, Water Management |

Design Features

Key Durability Benefits

- Metal housing for high impact resistance
- Wear-resistant build for long lifespan
- Robust construction for agricultural conditions

| | |
|-------------|---------|
| Pulley Type | Toothed |
