

Agricultural Irrigation Water Pump with Pulley

This water pump is designed for agricultural machinery, primarily for drainage and irrigation. It utilizes a pulley system for belt-driven operation and features a multi-vane impeller for efficient water movement.

Product Overview

Professional Agricultural Water Pump

This high-performance agricultural water pump is engineered for demanding irrigation and drainage tasks. Featuring a robust, durable housing, it is designed to withstand harsh field environments and consistent operation. The pulley-driven design allows for seamless integration with existing agricultural machinery, ensuring efficient water movement for various agricultural projects.

Technical Specifications

Drive Type	Belt-driven (Pulley system)
Design Features	Multi-vane impeller, Robust housing, Pulley-driven, Agricultural grade

Applications

Typical Applications

- Agricultural irrigation systems
- Water transfer
- Drainage projects
- Agricultural machinery integration
