

Agricultural Machinery

This category encompasses a wide range of equipment used in farming operations. It includes machines for soil preparation, planting, harvesting, and other agricultural tasks.

Overview

Professional Agricultural Machinery

This agricultural machinery is engineered to support efficient farming operations through advanced mechanical design. It is built to withstand rigorous field conditions while maintaining consistent performance levels. Designed for professional agricultural environments, it offers reliability and essential functionality for modern farming requirements.

General Information

Category	Agricultural Machinery
Research Origin	Nanjing Institute of Agricultural Mechanization
