

Agricultural Machinery Transmission Shaft

This high-performance transmission shaft is designed for agricultural machinery. It ensures efficient power transfer from the engine to driven components and is constructed from durable materials to withstand demanding conditions.

Product Overview

High-Performance Agricultural Transmission

This high-performance transmission shaft is engineered specifically for the demanding requirements of agricultural machinery. Designed for robust power transfer, it ensures reliable operation from the engine to driven components such as wheels or attachments. Its precision construction and wear-resistant materials provide an extended service life, helping to minimize downtime in harsh farming environments.

Technical Specifications

Max Static Torque

100000 N.m

Max Static Torque

Annual Production Capacity

300000 pcs

Applications

Compatible Equipment

Tractors, Harvesters, Combines, Agricultural Vehicles

Features

Key Features

- Precision-engineered universal joints
- Wear-resistant material construction
- Optimized for high-torque power transfer
- Designed for heavy-duty agricultural environments
